

## STATUS OF CLAIMS

1. (currently amended) A cutting tool for machining foodstuff ball comprising a main rod body(2) with a handle(1) and a semi-spherical bowl (4) with blade, is characterized in that a connection part (3) is disposed between the main rod body (2) and the semi-spherical bowl (4) with blade, the end face(41) of the semi-spherical bowl with blade and the axis of the main rod body (2) lie at 45-60 degrees, one or more holes (5) with geometrical shapes are provided on the semi-spherical surface(42) of the semi-spherical bowl with blade and the ~~around~~ brimsperipheries of the holes are provided with one or more blades (6) for cutting.
2. (original) A cutting tool for machining foodstuff ball according to claim 1, is characterized in that the sum of areas of the holes provided on the semi-spherical bowl (4) with blade is no more than 75% of the whole area of the surface (42) of the semi-spherical bowl with blade.
3. (original) A cutting tool for machining foodstuff ball according to claim 2, is characterized in that the sum of areas of the holes (5) provided on the semi-spherical bowl (4) with blade is no more than 60% of the whole area of the surface (42) of the semi-spherical bowl with blade.
4. (currently amended) A cutting tool for machining foodstuff ball according to claim 1, is characterized in that the orientation of the blades on the ~~around~~ brimsperipheries of the holes is consistent with that of the blades for cutting on the ~~around~~ brimsperipheries of the semi-spherical bowl with blade.
5. (currently amended) A cutting tool for machining foodstuff ball according to claim 1, is characterized in that blades (7) on the ~~around~~ brimsperipheries of the semi-spherical bowl holes are formed as an oblique blade, a right-angle blade or a combination of an oblique blade and a right-angle blade.
6. (original) A cutting tool for machining foodstuff ball according to claim 1, is characterized in that the said holes (5) are formed in the shape of banana, fan, arch, pear or cone.
